WORK EXPERIENCE

Software Engineer

iCrats Technologies

06/2021 - 09/2022

Kochi, India

Projects:

- **Door-Step-Banking:** A mobile application developed primarily for employees of banking or non-banking financial institutions to collect money from customers at their doorstep for loans and deposit services.
Technology Used: **React Native**
Roles and Responsibilities: Developed the entire UI for mobile application, which included a QR code scanner, navigation stacks, drawer navigation and so on. Started the project with Expo and later ejected to the bare workflow.
- **CKYC Management System:** A platform to manage customer KYC. Developed for use by financial institutions to verify customer KYC.
Technology Used: **Angular**
Roles and Responsibilities: Created a dashboard for displaying total, approved, pending, and rejected KYC. Implemented UI for uploading customer identification documents.
- **Semslate:** A web application for managing customer data of an eye hospital. Application stores entire history of patients, treatments, and medications.
Technology Used: **Angular, Node.js, MySQL**
Roles and Responsibilities: Involved in creating UI and worked in the server side. Created tables and stored procedures in the database.
- **Html to PDF converter:** A server-side application for converting html data to pdf.
Technology Used: **Node.js**
Roles and Responsibilities: Created the entire application that handles REST APIs.
